

# THE AMPHIBIOUS ADVANTAGE

With over 1800 amphibious craft delivered across the globe, Sealegs' amphibious boats deliver true versatility in an efficient and agile package

In the world of boating, the versatility and functionality of your equipment plays a crucial role in enhancing your overall experience. One of the most innovative and advantageous options available today is the amphibious tender. While traditional tenders have long been the norm, the emergence of amphibious boats has revolutionised the way we think about these essential vessels. When utilised as a tender to larger craft, amphibious craft bring a host of benefits that transform your maritime adventures. Not only does an amphibious tender offer exceptional usability and convenience, but

they are also a great way to explore the world beyond the water.

For over 20 years Sealegs International the original developer of amphibious boating has been building, delivering and supporting amphibious boating around the globe. Today Sealegs offers the broadest range of amphibious craft in the industry – from our 3.8m amphibious electric tender (on-land drive being provided by a 24 volt electric battery), through our traditional 6.1m, 7.1m, 7.5m and 9.0m rigid hull inflatable boats, to our range- topping Sealegs 12

metre cabin RIB. With all these models Sealegs has the perfect tender to meet your complete boating needs.

Over the past 20 years Sealegs have built and shipped over 1850 craft globally, so why should you consider an amphibious tender. Let's look at just a few of the reasons why.

#### Versatility and Accessibility

One of the most significant benefits of an amphibious tender is its ability to operate seamlessly in both aquatic and terrestrial environments. This versatility allows boaters

to access remote beaches, shallow waters, and even inland destinations that traditional tenders simply cannot reach. Imagine being able to drive your tender right up to a secluded beach for a picnic or exploring riverbanks without the need for docks or ramps. With an amphibious boat, this is not just a dream; it's a reality.

#### Enhanced Safety and Stability

Safety is a top priority for anyone venturing out on the water. Amphibious boats typically have a stable hull design and a lower centre of gravity, providing enhanced stability compared to other types of tenders. This stability is particularly important in rough conditions or while navigating through choppy waters. Additionally, the ability to drive the boat onto land can provide a safe haven in emergencies, allowing passengers to disembark without needing to rely on docks or moorings.

#### Easy Load and Unload

Loading and unloading passengers and gear can often be a cumbersome task with traditional tenders, requiring careful navigation and often the assistance of docks. Amphibious craft eliminate this issue by allowing you to drive right up to the beach or land, making it easy to load and unload without the need for complex transfers. This convenience is especially beneficial for families or groups with lots of gear, ensuring a smooth transition from the larger craft to the shore and vice versa.

#### Fun Factor

Beyond practicality, amphibious tenders not only add an element of excitement to your boating excursions, but they also represent a huge amount of fun! The novelty of being able to drive onto the beach and explore your surrounds adds an exciting

element to maritime adventures. Whether you're pulling up to a secluded beach for a picnic or launching into a river for a day of exploration, the versatility of an amphibious tender can transform the way you experience your surroundings. Amphibious craft also significantly simplify the loading/ unloading process while on land and importantly having landed at your favourite picnic spot, as the tide goes out you are no longer faced with the dreaded 'tender drag' back down the beach and into the water.

Like all industries the maritime world continues to evolve and change. It is human nature to continually be looking for smarter solutions to age-old problems – Sealegs have provided a solution to one of those challenges in the form of the amphibious tender. As noted above, with representation globally through Sealegs agents and dealers, Sealegs continue to build and grow globally. Our partners ensure they are uniquely positioned to service their many recreational as well as commercial European customers. In France Sealegs are ably represented by DB Marine and STL-Nautisme. Together we look forward to introducing you to the joy that is being amphibious.
